The evolution of concepts of the application of tethers in space is traced from its origin in the last century to today's tethered satellite system project. Early, ambitious concept descriptions are followed by sporadic efforts in late 1960's to the 1970's until NASA entered into systematic investigations of the theoretical and practical feasibility of various applications. These efforts ...

SPHERES Tether Slosh combines fluid dynamics equipment with robotic capabilities aboard the ISS to investigate automated strategies for steering passive cargo that contain fluids. In space, the fluid fuels used by spacecraft can slosh around in unpredictable ways making space maneuvers difficult. This investigation uses two SPHERES robots tethered to a fluid-filled container covered in sensors ...

Boeing, Tethers Unlimited, and the University of Maryland proposed an initial study of such a HASTOL system to NASA Institute for Advanced Concepts (NIAC) in 1998. The resulting studies have shown that there is a range of credible hypersonic aircraft velocities and tether tip velocities where the HASTOL concept may become technically feasible.
